

Saving Money While Increasing Lighting

Lumen Solutions worked with ITN Logistics to develop a clever lighting design for their 150,000 sq.ft. warehouse and office spaces to save operating and maintenance costs, increase lighting levels, and build flexibility into changing lighting behaviours in key areas.

We successfully increased warehouse lighting levels by 50%! Our certified professionals installed individual fixture mounted occupancy sensors that were adjustable from the floor with a remote control to customize lighting behaviour depending on area. Sensor lights are a great way to save money and reduce energy use because the lights are only on when necessary. ITN Logistics achieved an annual savings of \$41,490 with a payback of just 1.8 years through Lumen Solutions' lighting plan.

ITN Logistics Group delivers tailored international import/export solutions for air and sea freight forwarding, industrial project management, transborder transportation, warehouse and distribution services, logistic services, and intermodal transportation.
